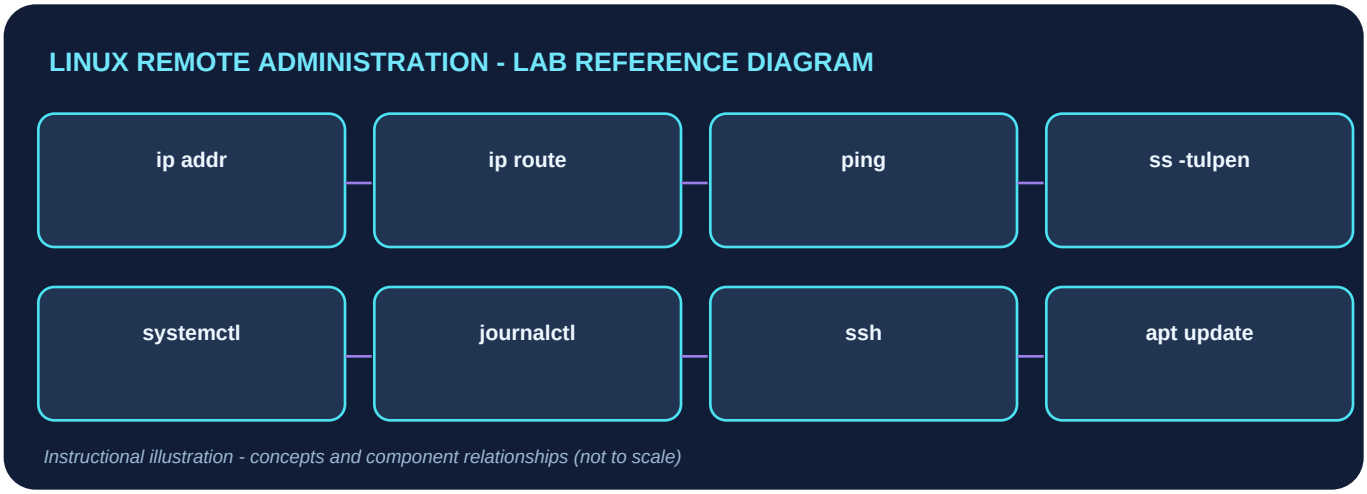
17.2.6 Configure Linux

STUDENT STUDY GUIDE + VOCABULARY + VISUAL REFERENCE

Learning goal

Manage networking, SSH, firewall and updates.

Reference image



Use the labeled illustration to identify the key components, commands, or checkpoints you will encounter in this lab.

Prepare for the simulation

1. Check addresses, routes and DNS resolver.
2. Test network path with ping and service ports with ss.
3. Inspect service health using systemctl and journalctl.
4. Perform authorized updates and verify SSH access.

Troubleshooting and safe practice

• No route: inspect gateway and interface state.

• Service down: check systemctl status and journal logs.

17.2.6 | VOCABULARY & REVIEW

Essential vocabulary

Term	Meaning / recognition cue
ip addr	Display or manage Linux IP interface addresses.
ip route	Display or manage the Linux routing table.
ping	Test reachability using ICMP echo traffic.
ss -tulpen	A key term in linux remote administration; identify its purpose, where it is used, and how to verify it.
systemctl	Manage or inspect systemd services.
journalctl	Read logs collected by systemd journal.
ssh	Secure Shell for encrypted remote command access.
apt update	A key term in linux remote administration; identify its purpose, where it is used, and how to verify it.

Knowledge check - answer in your own words

1. Identify two components or commands in the reference diagram and explain what each does.

2. What should you verify before changing or installing hardware, settings, or files in this lab?

3. Choose one listed failure symptom. What is your first safe diagnostic step?

4. How will you prove the task is complete, rather than merely assuming success?

Lab readiness checklist

[ ] I can identify the labeled reference items. [ ] I understand the safety precautions.

[ ] I can explain the vocabulary. [ ] I can verify and document successful results.
