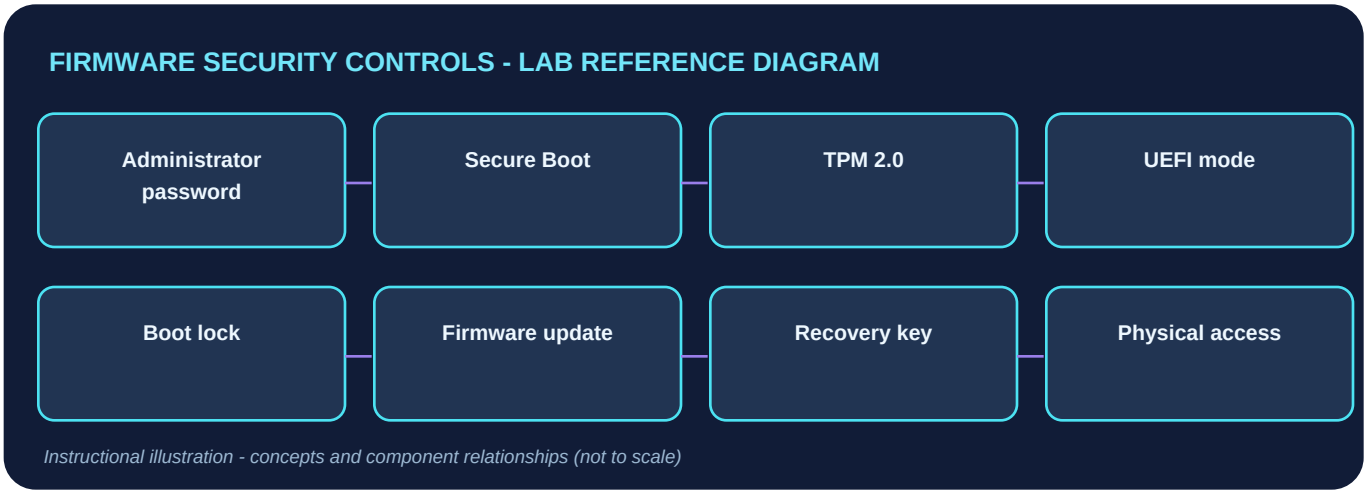
4.1.10 Configure BIOS/UEFI Security

STUDENT STUDY GUIDE + VOCABULARY + VISUAL REFERENCE

Learning goal

Protect firmware settings and boot process.

Reference image



Use the labeled illustration to identify the key components, commands, or checkpoints you will encounter in this lab.

Prepare for the simulation

1. Document the security baseline and authorized changes.
2. Configure firmware administrator access.
3. Enable appropriate Secure Boot and TPM settings.
4. Test boot and store recovery information securely.

Troubleshooting and safe practice

• Boot failure after change: revert authorized setting.

• Lost firmware password: follow vendor support procedure.

4.1.10 | VOCABULARY & REVIEW

Essential vocabulary

Term	Meaning / recognition cue
Administrator password	A key term in firmware security controls; identify its purpose, where it is used, and how to verify it.
Secure Boot	UEFI feature that validates authorized boot components.
TPM 2.0	A key term in firmware security controls; identify its purpose, where it is used, and how to verify it.
UEFI mode	A key term in firmware security controls; identify its purpose, where it is used, and how to verify it.
Boot lock	A key term in firmware security controls; identify its purpose, where it is used, and how to verify it.
Firmware update	A key term in firmware security controls; identify its purpose, where it is used, and how to verify it.
Recovery key	A key term in firmware security controls; identify its purpose, where it is used, and how to verify it.
Physical access	A key term in firmware security controls; identify its purpose, where it is used, and how to verify it.

Knowledge check - answer in your own words

1. Identify two components or commands in the reference diagram and explain what each does.

2. What should you verify before changing or installing hardware, settings, or files in this lab?

3. Choose one listed failure symptom. What is your first safe diagnostic step?

4. How will you prove the task is complete, rather than merely assuming success?

Lab readiness checklist

[ ] I can identify the labeled reference items. [ ] I understand the safety precautions.

[ ] I can explain the vocabulary. [ ] I can verify and document successful results.
